Streamline and Automate Your IMP

Identifying potential threats and risks ranking from tons of records in different formats is one of the biggest challenges for any operator. But if no records exist or is found to be erroneous to use for correct analysis, it can be a real nightmare. If no real correlation can be found between historical data and threats are some records missing or forgotten to be included?

Our Integrity Management Program database system will quickly perform a risk and threats analysis to help you streamline your IMP

How Will This System Work for You?

- Centralizes all records from any location and in any format into one system
- Sets up an automatic matrix to locate threats based on at least your Assessment results
- Fine tunes the threats with your SME's experience
- Automatically calculates each threats' risk ranking by having quantitative values of your COF and POF correctly identified
- Calculates the total risk by having access to all relevant data and historical records
- Generates an automatic matrix available to locate, and/or suggest what Preventative methodologies should be considered

Go Beyond Project Management

Take back control and start managing your projects & team more effectively.

- Manage project information (assets, parts, etc.)
- Manage timelines
- Collaborate on tasks
- Allocate resources and resource hours
- Oversee budget and expenses
- Review workflows
- Create reports

O&M Processes & Procedures

Use the system to help manage your O&M program and comply with federal, state and local laws and regulations.

- Valve Maintenance
- SCADA Systems
- Cathodic Protection
- Valve Inspection
- Metering
- Etc.

The Right Information Where you Need it

Online Document Centralization

Store all regulatory-required documentation, work procedure, guidance docs and much more in one centralized location. Associate the documentation to related tasks and projects ensuring all task holders are on the same page. Your team will know what needs to be done, when it must be done and who needs to do it. Everyone's work is in one place, with a clear view of progress.

Scheduling & Compliance

Non-compliance can lead to fines, disruption of operation, and liabilities. With our scheduling tool and its built-in OQ parameters, you can be sure that all tasks performed comply with OQ regulations. Use the system to store and identify regulatory-required documents for easy access and timely notification of changes. Automation of compliance tasks can clearly help to reduce cost, improve data and process integrity, as well as enhanced agility and visibility across the enterprise.

Budget Management

Gain assurance that all required documentation and reports are submitted on time and that reports are completed before closing the project or making a payment. Manage payment with matched work completion percentages and avoid paying for incomplete work.

	\$M	\$K	\$C
Q. Budget Pending	1,000.00	10.00	10.00
Q. Budget In	500.00	5.00	5.00

Reporting

Get unparalleled management visibility. With unlimited report template customization available in real-time, project managers, team members, owners, sub-contractors and anyone else with the proper authority can easily access, generate and print into professional PDFs, Excel and Word the reporting data needed to make informed business decisions and achieve business goals.

At-a-Glance Visibility into All Phases of the Project

The System Integrates with the Way You Work

We provide a visually engaging way to display your project's status with our dynamic dashboards. Immediately oversee critical project management information for effective decision making such as major milestones, deadlines, delays, alerts, recent activity and many other customizable features.

Import data for your projects and tasks directly from Microsoft Office Outlook, Word, and Excel.

Not at the office? Stay in-sync with your team and track your project wherever you go.

Surface unique insights with greater context by visualizing your data with Google maps.
